Powder Technology 102 (1999) 302–304

POWDER TECHNOLOGY

Subject Index of Volume 102

Additive powder
Effects of adding different size particles on fluidization of cohesive particles, 215
Agglomerate fluidization
Effects of adding different size particles on fluidization of cohesive particles, 215
Agglomerate number
Effects of adding different size particles on fluidization of cohesive particles, 215
Agglomeration
Examination of dispersed liquid-phase three-phase fluidized beds. Part 2: Porous, and non-spherical particle systems, 37
Pulverization of rubber under high compression and shear, 207
Al powder
Influence of atomising gas pressure on particle shape of Al and Mg powders, 109
Appolonian packing
The construction of an appolonian packing, 274
Atomising gas pressure
Influence of atomising gas pressure on particle shape of Al and Mg powders, 109

Benzopinacol
Benzopinacol particle formation in lyotropic liquid crystals, 221
Bulk density
The use of bulk density measurements as flowability indicators, 151

Cam-clay
Finite element model development and validation for incipient flow analysis of cohesive powders from hopper bins, 184
Carbon oxide
Preparation of nanometer copper borate with supercritical carbon dioxide drying, 171
Catalyst
Supercritical antisolvent precipitation of nanoparticles of a zinc oxide precursor, 127
Catalyst impregnation
Mixing dynamics in catalyst impregnation in double-cone blenders, 85
Chaos analysis
Detection of local fluidization characteristics using the *V* statistic, 95
Characterization
The experimental evaluation of die compaction lubricants using deterministic chaos theory, 253
Chlorination
Kinetic study of chlorination of niobium (V) oxide with chlorine and carbon monoxide, 177
Chord measurements
Particle and droplet size analysis from chord distributions, 75
Circulating fluidized bed
Radiative heat transfer in a circulating fluidized bed coal combustor, 266

Classification
Study on horizontal turbine classification, 166
Coarse grained particles
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Cohesive
Examination of dispersed liquid-phase three-phase fluidized beds. Part 2: Porous, and non-spherical particle systems, 37
Cohesive particles
Effects of adding different size particles on fluidization of cohesive particles, 215
Comminution
Time-dependent particle-size distributions in comminution, 71
Copper borate
Preparation of nanometer copper borate with supercritical carbon dioxide drying, 171
Critical size range
The use of bulk density measurements as flowability indicators, 151

Defluidization
Examination of dispersed liquid-phase three-phase fluidized beds. Part 2: Porous, and non-spherical particle systems, 37
Defluidized zones
Detection of local fluidization characteristics using the *V* statistic, 95
DEM simulation
Particle and droplet size analysis from chord distributions, 75
Dense phase
Real time visualisation and analysis of dense phase powder conveying, 1
Discrete element simulation
A new calculation method for particle motion in tangential direction in discrete element simulations, 235
Double-cone blender
Mixing dynamics in catalyst impregnation in double-cone blenders, 85
Dynamics
Analysis of the dynamics of heat transfer between a hot wire probe and gas fluidized beds, 53

Elevated static pressure
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Extruder
Pulverization of rubber under high compression and shear, 207

Feeder
Mechanics of a concentrated slurry feed system, 227
FEM
Finite element model development and validation for incipient flow analysis of cohesive powders from hopper bins, 184
Finite element method
Particle and droplet size analysis from chord distributions, 75

Elsevier Science S.A.
PII: S0032-5910(99)00066-2

Fish-hook effect
Study on horizontal turbine classification, 166
Flow
The experimental evaluation of die compaction lubricants using deterministic chaos theory, 253
Flowability
The use of bulk density measurements as flowability indicators, 151
Fluid flow
Industrial modeling of spirals for optimal configuration and design: spiral geometry, fluid flow and forces on particles, 244
Fluidization
Detection of local fluidization characteristics using the *V* statistic, 95
Fluidization quality
Examination of dispersed liquid-phase three-phase fluidized beds. Part 2: Porous, and non-spherical particle systems, 37
Fluidized bed
Measurement techniques in fluidized beds, 15
Analysis of the dynamics of heat transfer between a hot wire probe and gas fluidized beds, 53
Forces on particles
Industrial modeling of spirals for optimal configuration and design: spiral geometry, fluid flow and forces on particles, 244
Fully suspended type of conveying
Pneumatic transport of coarse grained particles in horizontal pipes, 135

Gas chromatography
Some theoretical and experimental limitations in the determination of surface free energy of siliceous solids, 120
Gas–solid flow
Measurement techniques in fluidized beds, 15
Gas/solid flow
A quasi-one-dimensional model for gas/solids flow in venturis, 281
Granular materials
Time-dependent particle-size distributions in comminution, 71
Grinding
Time-dependent particle-size distributions in comminution, 71

Heat transfer
Analysis of the dynamics of heat transfer between a hot wire probe and gas fluidized beds, 53
Hopper bins
Finite element model development and validation for incipient flow analysis of cohesive powders from hopper bins, 184
Horizontal turbine
Study on horizontal turbine classification, 166
Hot wire anemometer
Analysis of the dynamics of heat transfer between a hot wire probe and gas fluidized beds, 53

Insert
A scaled model study on the solid flow in a shaft type furnace, 194
Instantaneous separation model
Instantaneous separation model of a square cyclone, 65
Interparticle forces
Examination of dispersed liquid-phase three-phase fluidized beds. Part 2: Porous, and non-spherical particle systems, 37

Kinetic study
Kinetic study of chlorination of niobium (V) oxide with chlorine and carbon monoxide, 177

Lognormal distribution
Time-dependent particle-size distributions in comminution, 71
Lubricants
The experimental evaluation of die compaction lubricants using deterministic chaos theory, 253
Lubrication
Mechanics of a concentrated slurry feed system, 227
Lyotropic liquid crystals
Benzopinacol particle formation in lyotropic liquid crystals, 221

Measurement technique
Measurement techniques in fluidized beds, 15
Mg powder
Influence of atomising gas pressure on particle shape of Al and Mg powders, 109
Milling
Time-dependent particle-size distributions in comminution, 71
Mixing dynamics
Mixing dynamics in catalyst impregnation in double-cone blenders, 85

Nanometer particle
Preparation of nanometer copper borate with supercritical carbon dioxide drying, 171
Nanoparticle
Supercritical antisolvent precipitation of nanoparticles of a zinc oxide precursor, 127
Niobium oxide
Kinetic study of chlorination of niobium (V) oxide with chlorine and carbon monoxide, 177

Packing
Mechanics of a concentrated slurry feed system, 227
Par-Tec 300
Particle and droplet size analysis from chord distributions, 75
Particle and droplet sizing
Particle and droplet size analysis from chord distributions, 75
Particle motion
A new calculation method for particle motion in tangential direction in discrete element simulations, 235
Particle-size distribution
Time-dependent particle-size distributions in comminution, 71
Particle size distribution
Study on horizontal turbine classification, 166
The construction of an appolonian packing, 274
Photochemical reaction
Benzopinacol particle formation in lyotropic liquid crystals, 221
Plugging limit
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Pneumatic transport
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Powder conveying
Real time visualisation and analysis of dense phase powder conveying, 1
Power law
The construction of an appolonian packing, 274
Pressure drop
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Pulverization
Pulverization of rubber under high compression and shear, 207

Quasi-one-dimensional model
A quasi-one-dimensional model for gas/solids flow in venturis, 281

Radiative heat flux
Radiative heat transfer in a circulating fluidized bed coal combustor, 266
Real time visualisation
Real time visualisation and analysis of dense phase powder conveying, 1
Rubber
Pulverization of rubber under high compression and shear, 207

Scaled model
A scaled model study on the solid flow in a shaft type furnace, 194
Self-sustained particle transport
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Separation mechanism
Instantaneous separation model of a square cyclone, 65
Shear deformation
Pulverization of rubber under high compression and shear, 207
Silica gel
Some theoretical and experimental limitations in the determination of surface free energy of siliceous solids, 120
Slurry
Mechanics of a concentrated slurry feed system, 227
Solid flow
A scaled model study on the solid flow in a shaft type furnace, 194
Spiral geometry
Industrial modeling of spirals for optimal configuration and design: spiral geometry, fluid flow and forces on particles, 244
Square cyclone
Instantaneous separation model of a square cyclone, 65
Strand flow type of conveying
Pneumatic transport of coarse grained particles in horizontal pipes, 135
Supercritical antisolvent
Supercritical antisolvent precipitation of nanoparticles of a zinc oxide precursor, 127
Supercritical drying
Preparation of nanometer copper borate with supercritical carbon dioxide drying, 171
Surface free energy
Some theoretical and experimental limitations in the determination of surface free energy of siliceous solids, 120
Surfactants
Benzopinacol particle formation in lyotropic liquid crystals, 221
Suspension emissivity
Radiative heat transfer in a circulating fluidized bed coal combustor, 266

Tangential force
A new calculation method for particle motion in tangential direction in discrete element simulations, 235
Thin column wicking
Some theoretical and experimental limitations in the determination of surface free energy of siliceous solids, 120
Timeline
A scaled model study on the solid flow in a shaft type furnace, 194
Triboelectric sensors
Detection of local fluidization characteristics using the *V* statistic, 95

Venturis
A quasi-one-dimensional model for gas/solids flow in venturis, 281
V statistic
Detection of local fluidization characteristics using the *V* statistic, 95
